Example circuit (method II)

Circuit 1A: Let's deduce the output $P = f(S1, S0, A, B) = ((A \cdot B) + (S0' + A')')' \cdot (S1 + S0' + B') \cdot (S1 \cdot S0' \cdot A' \cdot B')'$

[WolframAlpha](#):

truth table (not(A and B or not(S0) or not(A))) and (S1 or not(S0) or not(B)) and (not(S1 and not(S0) and not(A) and not(B)))

In order to write down the minterms or maxterms, let's order the variables as $P = f(S1, S0, A, B)$, so:

$$P = f(S1, S0, A, B) = \prod_4 M(3, 5, 6, 7, 8, 11, 14, 15) = \sum_4 m(0, 1, 2, 4, 9, 10, 12, 13)$$
